Shubhi Bhoora	300228522
Tristan Gaudreault	300252856
Bella Wu	300249920

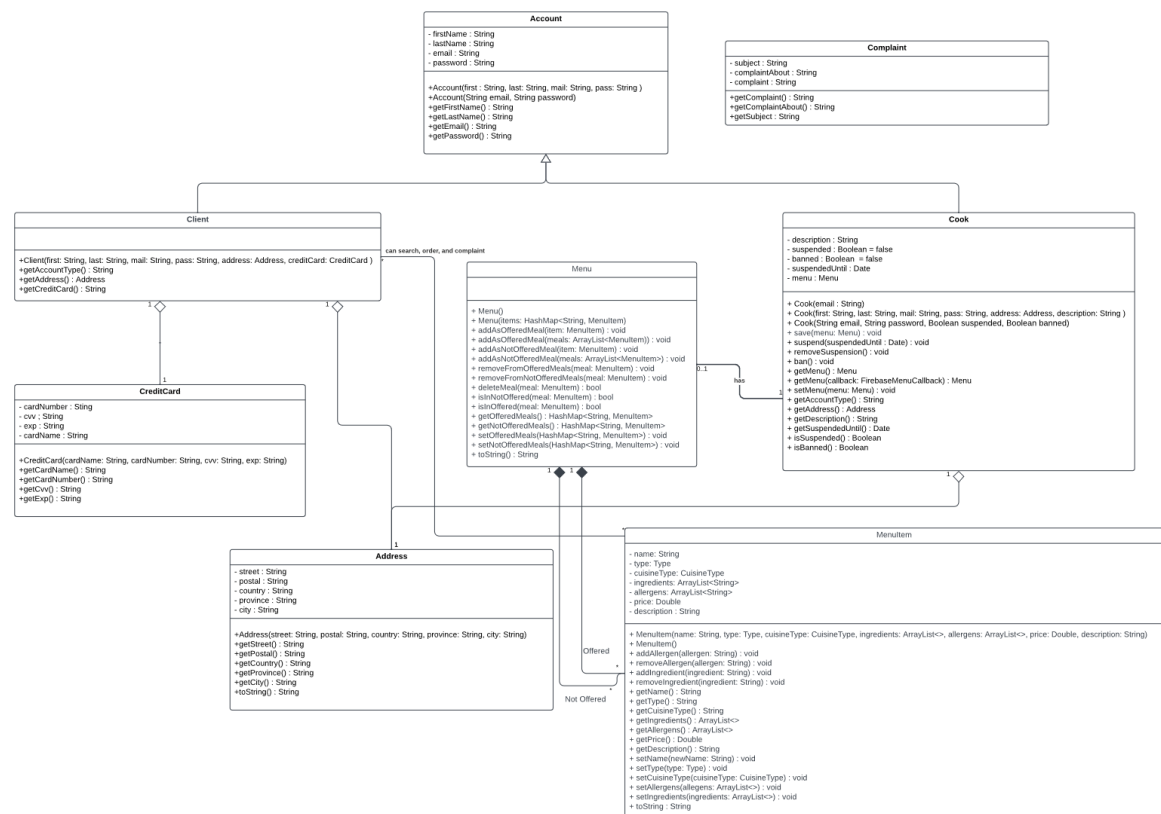

# Introduction

Throughout this semester, our group worked on this home meal preparation application. It was for all of us our first experience designing an application for android. For most of us it was also the first time we collaborated on a software project to this extent and used tools such as firebase and JUnit.

Teamwork was at the heart of this project, and was at first quite complicated to manage, but as time went on we improved our methods making the later deliverables more organised and efficient.

This report will show the results of the project as well as the journey we took to achieve it.

## UML

## Contributions

Group members				
Deliverable	Matsuru ultra-passion-fruit(github)	Shubhi	Bella	Tristan
1	Built sign in and base sign up interfaces.  Built a basic home	Did the sign in verification for cooks and clients.  Stored account	Made java classes for account, cook, client, admin, address, and credit card.	Helped create the UI needed for the project. Namely organizing elements in

	<p>interface for clients and cooks to show the welcome message.</p> <p>All screens had sign out buttons added.</p> <p>Updated UML Class diagram.</p>	<p>information, for cooks and clients, from sign up on the firebase.</p> <p>Did the “Welcome Screen” message, specifying the signed in user’s role.</p> <p>Added error messages and validated all text fields and user inputs.</p>	<p>Created the foundation of the UML Class diagram.</p>	<p>LinearLayouts.</p> <p>Helped make the check that determines if some fields are empty.</p>
2	<p>Implemented Menu.</p> <p>Implemented suspension and banned part of the cook class.</p> <p>Fixed admin UI for better visibility.</p> <p>Helped create Unit tests.</p> <p>Cleaned up and fixed code from the previous deliverable.</p>	<p>Connected CircleCI to our github.</p> <p>Connected the complaints from the database to adminhome.</p> <p>Allowed Admin to ban and suspend cooks. Also allowing Admin to dismiss complaints.</p> <p>Created toast messages informing cooks whether they are banned or suspended when they try to log in.</p> <p>Changed cook’s account status on the database.</p>	<p>Helped create foundation for menu, meal, etc</p> <p>Established necessary connections between classes</p> <p>Updated the UML following project changes</p>	<p>Created the home activity for admins.</p> <p>Created the ListView used to show the complaints.</p> <p>Linked the database array given by another member to the ListView.</p> <p>Created an alert to manage the complaints.</p> <p>Created some Unit tests.</p>
3	<p>Implemented cook Database connection to a Menu.</p> <p>Implemented cook ability to save a Menu under their name in the database.</p> <p>Implemented MenuItem and Menu classes and related database connection.</p> <p>Updated UML Class diagram to reflect addition of new classes.</p>	<p>Prevented Cook from deleting a meal from the menu if it was currently in the offered meals list.</p> <p>Allowed cooks to remove or add a meal to the offered meals list.</p> <p>Did database connections for adding new meals to their respective cook.</p> <p>Added error messages and validated all text fields and user inputs.</p>	<p>Created the test case files that implemented 4 unit test cases.</p> <p>Updated UML Class diagram following project changes</p> <p>Updated UI for better functionality and consistency</p> <p>Created the App logo</p>	<p>Layed down the foundation for the UI needed to add meals. Left comments to indicate where database integrations are needed.</p> <p>Made an Alert to manage existing meals.</p>
4	<p>Created a proper navigation for the app with a Home, Search,</p>	<p>Completed, CookHomeFragment file.</p> <p>Added database connection</p>	<p>Connected Meal Requests to database, and helped connect complaint</p>	<p>Layed down the foundation for the UI needed in deliverable 4.</p>

	<p>Menu/History, depending on the user</p> <p>Made most of the navigation UI between fragments.</p> <p>Introduced Fragments to make the app more lightweight and easier to use.</p> <p>Created cook profile view for cook. Implemented all necessary cook profile information.</p> <p>Implemented Search for client. Implemented History for client.</p> <p>Implemented complaints with Database and connected to other fragments of the app.</p>	<p>to deal with client meal requests. Added functionality to allow cooks to accept or reject meal requests from clients.</p> <p>Added Client status of their purchase (pending, approved, or rejected) to clientHomeFragment.</p> <p>Sent meal request data to the database from clientSearch.</p> <p>Sent cook complaint data to the database from clientComplaint</p> <p>Validated fields in clientComplaint.</p>	<p>submissions</p> <p>Updated some UI design for consistency</p> <p>Updated the UML Class diagram following changes to project</p> <p>Created the test case files that implemented 4 unit test cases.</p> <p>Wrote up the report.</p>	<p>Made the UI for the client complaints.</p> <p>Wrote up the report.</p> <p>Helped with</p>

## Screenshots

### Sign in / Sign up

The image displays two side-by-side screenshots of a mobile application interface for 'Mealer'. The app's logo, featuring a chef's hat and the word 'Mealer' in a red script font, is centered at the top of both screens. The left screen is the 'Sign in' page, which includes input fields for 'email' and 'password' (with a toggle icon), a red 'Sign in' button, and a red 'Sign up' link. The right screen is the 'Sign Up' page, which includes a 'Sign up as..?' section with a 'Client' input field, a 'Personal information' section with input fields for 'First Name', 'Last Name', 'Street', 'Postal', 'Province', and 'Country', and a red 'Sign up' button. Both screens have a light blue background and a black status bar at the top showing the time (8:00 and 8:01) and various icons.

## Lessons Learned

In conclusion, this app project served as an excellent hands-on experience on one of the many typical applications of software engineering. We applied the concepts that were taught in our lectures and tutorials, such as modelling systems with UML Class diagrams, connecting our application to Firebase, and overall designing an app with Android Studio that will allow for easy use by its intended audience.
